\* All microphones, stands, guitar devices and mix console have our own, we only use 230V sockets at marked locations.

\* We have our IEM. If possible, please remove wedge monitors from stage.

\* For loading and unloading of technique, we need access to the car as close as possible to the stage and ask at least 2 helpers before the sound test and after the concert.

\* We ask for a clean and safe stage with min. 8 x 6 m and podium for drums min. 3 x 2 m - for connection to your PA we only need 1x CAT 5 cable (from stage to FOH) and 2x XLR (LR).

\* Please provide power supply 400V/16A for 4x Geysers.
